

EE371

Compact Dew Point Sensor

The EE371 is dedicated for accurate and reliable monitoring of the dew point temperature (Td) in the range -60...60 °C Td (-76...140 °F Td), with pressure rating up to 100 bar (1450 psi). It is ideal for compressed air systems and industrial process control. Besides Td, the device measures also frost point temperature (Tf) or volume concentration (Wv).

High Accuracy

The innovative, monolithic E+E HMC01 humidity and temperature sensing element together with a sophisticated auto-calibration procedure leads to accuracy better than ±2 °C Td (±3.6 °F Td) and to excellent long term stability.

Analog Outputs and Display

The measured data is available on two freely configurable voltage or current outputs as well as on the LCD display.

Functional Design

The compact, robust metal enclosure, the swirling front-end and various process connections and sampling options allow for easy and comfortable design-in, mounting and operation.

Easy Configuration

An optional adapter and the free EE-PCS Product Configuration Software facilitate easy configuration and adjustment of the EE371.

Features

- Measuring range -60...60 °C Td (-76...140 °F Td)
- Accuracy of measurement ±2 °C Td (±3.6 °F Td)
- Autocalibration
- Pressure tight up to 100 bar (1450 psi)
- 360° axial rotatable enclosure
- Inspection certificate according to DIN EN 10204 – 3.1

Autocalibration

Dew point temperatures in the range of -60...-20 °C (-76...-4 °F) at room temperature correspond to relative humidity values of 0.08...5.37 % RH. The measurement of these low humidity values is not possible with conventional capacitive measurement methods. For the EE371 a special autocalibration procedure is utilized to achieve high accuracy measurements at lowest dew points too.

Sampling Cells

Basic Sampling Cell

The basic sampling cell is suitable for the pressure range 0...64 bar (0...928 psi). It allows a simple installation of the dew point sensor into an existing or self-constructed sampling system.

Sampling Cell with Quick Connector and Bleed Screw

The sampling cell is optimized for the pressure range 0...10 bar (0...145 psi). The air flow can be adjusted with the bleed screw. The G 1/2" ISO version features a quick connector suitable for standard DN7.2 connection, which allows for the sampling cell to be mounted and removed without process interruption.

Sampling Cell for Atmospheric Dew Point

The sampling cell is optimized for measuring the atmospheric dew point temperature of compressed air with pressure range 0...10 bar (0...145 psi). It features a quick connector suitable for standard DN7.2 air connection, which allows for the sampling cell to be mounted and removed without process interruption. The pressure in the sampling cell can be set by the needle valve.
