

## EE240 Series

State of the art sensor technology, highest reliability of data transmission and the ease of system installation are the outstanding features of the wireless sensor series EE240. Indifferent whether a point-to-point connection or a complex network is required, the series EE240 offers the ideal solution.

### Wireless Transmitter EE245

The elegant housing combines the measurement of temperature, humidity and CO<sub>2</sub>. An optional display is available to provide local indication. As a standard, batteries provide for the power supply. For more power demanding applications the device can be powered through an external adapter.

### Wireless Transmitter EE244

The industrial housing can be equipped with up to three sensing probes to contact the interchangeable probes. An optional display is available to provide local indication. As a standard, batteries provide for the power supply. For more power demanding applications the device can be powered through an external adapter.

### Interchangeable Sensing probes

A modular structure and easy extendable assortment of sensing probes allow the usage in many applications. For many years, the proven sensor technology of E+E for the measurement values of humidity, temperature, and CO<sub>2</sub> guarantee precise measurements and the highest longtime stability.

The standard interface and the stored calibration data of the sensing probe allow for any choice or combination of the available sensing probes offered. An adaptation or expansion of the number of sensing probes afterwards or an exchange for service purposes can be achieved in seconds – a must-have for uninterrupted data acquisition. For high temperature applications or installations in small spaces, the sensing probe can be connected with a sensor cable of up to 10 m (33 ft) in length.

### Base Station EE241 and EE242

Do you have to traverse a street? The inexpensive point-to-point connection can be accomplished very easily with the **EE241**.

The configuration at the factory of the up to four transmitted measurement values is done in accordance with your specifications, meaning that the values are available as analogue outputs (0 – 5 / 10 V or 4 - 20 mA) immediately after installation.

For more complex networks (up to 500 transmitters or up to 2000 measurement values) is the user-configurable **EE242** available.

Independent of the topology of the network the integrated Webserver and the Ethernet interface warrants highest flexibility in the configuration of the network with a computer. A simple integration of the measurement system in the customer's network and the easy remote access and diagnostic of the measurement data are additional helpful features. The output values can be transferred as an analogue signal, as well as in digital form (via Ethernet). For a bus integration, Modbus will be supported. The actual measurement values and some operational information can be indicated on an optional display.

### Router Series EE244-R

The radio range is greatly depending on local circumstances. With the router series EE244-R obstacles can be bypassed or the transmission distance expanded.

## Wireless Sensor for Humidity / Temperature / CO<sub>2</sub>

## Typical Applications

Pharma and Food Industry  
Warehouses and Cooling Chambers  
Control Rooms  
HVAC Systems and Museums

## Features

Interchangeable Sensing Probes  
Remote Probes up to 10 m (33 ft)  
Battery Operating Life up to 1 Years  
Ethernet and Webserver

## Highest Transmission Reliability

The data transmission is based on the IEEE 802.15.4 protocol with a transmission frequency of 2.4 GHz, which can be used all over the world without any additional cost. A special identification address, checksums, handshakes, and bidirectional communication provide the highest transmission reliability. Typical radio ranges are 60 m (197 ft) for indoor applications and 1000 m (3300 ft) in the open field. Greater radio ranges are easy obtainable with routers. The self-configuring, scalable, and self-healing mesh network, even when a connection fails, is another component contributing to the improvement of the transmission reliability and security. The highest possible data security level is accomplished with a preset encryption key according to AES-128.

## Parallel Operation

Parallel operation of several EE240 wireless networks (i.e. several base stations) is also possible. For this each transmitter may be within the transmission range of the routers and basis station of one network only.

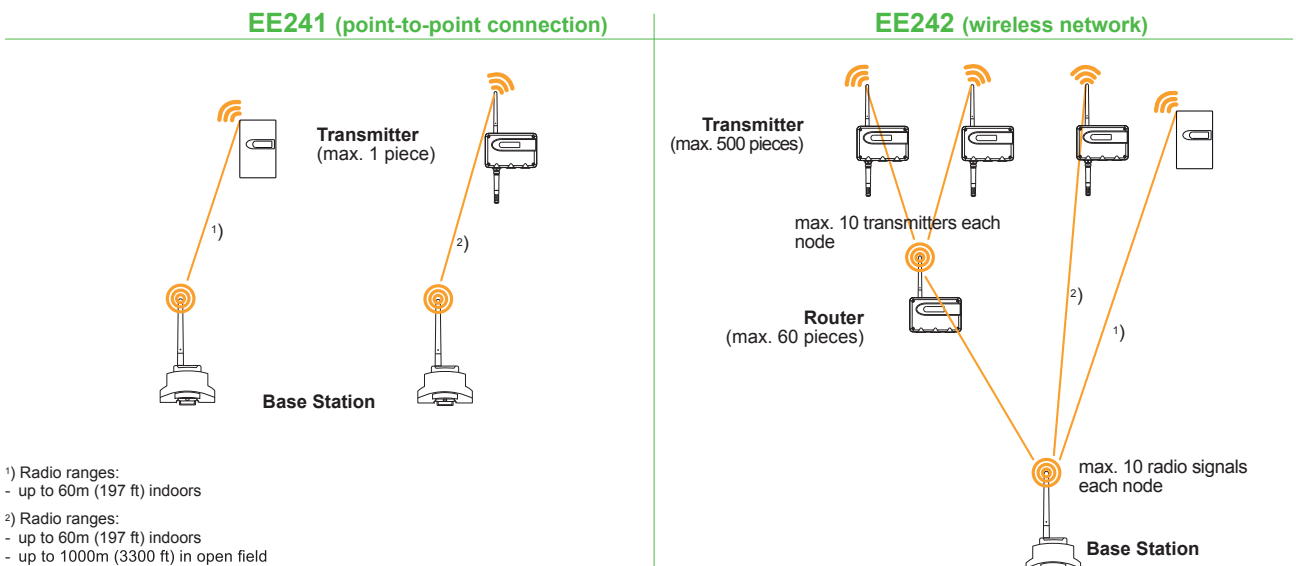

## Digital bus connection

For bus integration, Modbus is supported. Communication is implemented via Ethernet or RS485 interface. Bus connection is only supported by the base station EE242.

## Installation / Remote Access / Maintenance via Webserver

The integrated Webserver allows platform-independent installation, remote access and easy maintenance with any commercially available browser (Chrome, Internet Explorer, Firefox,...) on a computer without additional software.
