

## EE850

## CO<sub>2</sub> and Temperature Transmitter for Duct Mounting

The EE850 is designed for use in building management applications. A multiple point CO<sub>2</sub> and temperature factory adjustment procedure leads to excellent CO<sub>2</sub> measurement accuracy over the entire temperature working range.

The EE850 incorporates the E+E dual wavelength NDIR CO<sub>2</sub> sensor, which compensates for ageing effects, is highly insensitive to pollution and offers outstanding long term stability.

Installed into a duct, a small amount of air will flow through the divided probe into the transmitter housing, where the CO<sub>2</sub> sensing cell is located, and back into the duct. The temperature sensor is located inside the probe.

The CO<sub>2</sub> concentration up to 10,000 ppm and the temperature are available on the voltage or current analogue outputs. The EE850 offers an additional option for a passive temperature sensor output with 2-wires connection. An optional kit facilitates easy configuration and adjustment of EE850.
